Trend Micro ScanMail for Exchange 6.1

Trend Micro trendmicro.com

VERY GOOD 7.3

COST: \$21.90 per user for 500 users

BOTTOM LINE: ScanMail is rich in security features, easy to set up and administer, and manageable by both Windows and Web clients, but it falls short in value, costing significantly more than competing solutions. By default, ScanMail does not scan the bodies of incoming e-mails; this ill-advised setting hampered its performance out-of-the-box.

infoworld.com/69

APPLICATION SECURITY

Akonix L7 Enterprise 2.0

Akonix Systems akonix.com

VERY GOOD 7.3

COST: Annual subscription for 50 users, \$2,250

BOTTOM LINE: This IM management server addresses security and productivity concerns around using public IM in the enterprise. The L7 proxy server works handily with a firewall to authenticate IM users, apply access policies, and log communications in SQL Server.

infoworld.com/589

DataPower XS40 XML Security Gateway

DataPower Technology datapower.com

EXCELLENT 8.6

COST: \$65,000

BOTTOM LINE: The DataPower appliance looks and feels like a datacenter appliance: no extra ports or buttons exposed and no rotating media. The hardware-based XML processing allows pervasive Schema validation and enables flexible programming via the XSL style sheets.

infoworld.com/480

eEye SecureIIS Version 2.0

eEye Digital Security eeye.com

VERY GOOD 8.1

COST: As tested, \$995; single server, \$2,995; enterprise license based on size of Web site, number of servers, and event management capability, \$4,995 to \$9,995

BOTTOM LINE: SecureIIS wraps itself around an IIS server at the ISAPI (Internet Server API) layer, protecting servers from known and unknown attacks. This frees security admins from constant reactive analysis and patch management. Protection is quick to implement, effective, and has a minimal impact on performance.

infoworld.com/14

Forum Sentry 1504

Forum Systems forumsystems.com

VERY GOOD 7.9

COST: \$35,000

BOTTOM LINE: Of the three XML firewall appliances tested, the Forum Sentry 1504 feels the most like a firewall, with an IOS (Internetwork Operating System) interface and policies selected according to XPath criteria. However, the Sentry's multiple user interfaces can be confusing to users expecting a simpler entry point.

infoworld.com/480

KaVaDo ScanDo, InterDo, and AutoPolicy

KaVaDo kavado.com

EXCELLENT 9.3

COST: \$25,000 for suite; applications can be purchased individually

BOTTOM LINE: The KaVaDo suite guards against attacks on Web servers, Web app servers, and databases, working to scan and intercept malformed or unauthorized HTTP, WebDAV, and Web services requests, and to impose security policies on the use of Web applications.

infoworld.com/66

Reactivity XML Firewall XF2150

Reactivity reactivity.com

VERY GOOD 8.3

COST: Starts at \$50,000

BOTTOM LINE: The Reactivity appliance is very close in feel and philosophy to other Web service intermediary products, even though it has firewall roots. It's a good choice when the goal is creating a secure interface to Web services; the management console is very intuitive.

infoworld.com/480

Teros-100 APS

Teros teros.com

EXCELLENT 8.8

COST: \$25,000 per APS, including optional modules

BOTTOM LINE: Teros-100 APS offers best-of-breed features in an advanced content-inspection product or application-layer firewall. It is simple to set up and manage, is broadly scalable, and is brutally effective at blocking content that could do as much damage to a company's reputation as it could to its network.

infoworld.com/116

DATA SECURITY

Cyber-Ark Inter-Business Vault 2.0

Cyber-Ark Software cyberark.com

VERY GOOD 8.5

COST: Starts at \$56,000 for basic implementation

BOTTOM LINE: Cyber-Ark's Inter-Business Vault provides a trustworthy, secure, and reliable infrastructure for sharing proprietary or confidential files with employees, customers, and partners. Multiple interface options provide simple ways of integrating the vault with legacy systems and external partners, making Inter-Business Vault worthy of consideration for any enterprise's security and storage plans

infoworld.com/478

Decru DataFort E440

Decru decru.com

VERY GOOD 8.4

COST: \$30,000

BOTTOM LINE: This security appliance encrypts sensitive business data on network storage devices, providing the ultimate protection against intrusions. It is an extremely effective complement to other security systems. Installation and configuration are straightforward and have minimal impact on end-users. Multiple appliances can be deployed in parallel and in fail-over mode to improve scalability and resilience.

infoworld.com/81

NetBotz WallBotz 500

NetBotz netbotz.com

EXCELLENT 9.1

COST: Base station, one camera pod, and one sensor pod, \$2699
